- *What is the most important factor to consider and why?*
- *Share your ideas & views of the future*

The most important factor

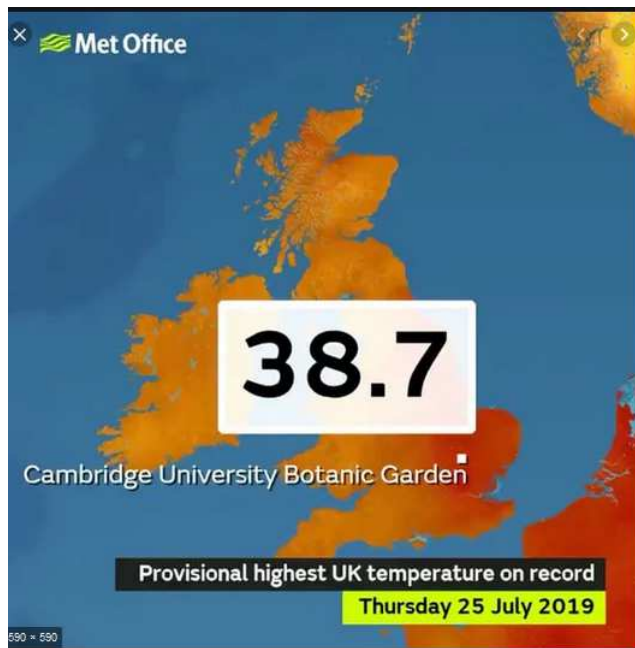

- Reducing the scale and impact of climate change

This means halving fossil fuel use well within a decade

Why?

To avoid catastrophic climate change.....

This is just the start

Better, healthier lives for all.....

How?

Make it attractive and easy

- to switch from polluting vehicles to clean ones,
- to share transport,
- to travel less.
- to own fewer cars

An idea: Reclaim our streets

Reducing parking is a fair and effective way to help reduce traffic

- Lets reclaim our streets for
 - Parks, “parklets” and greenery
 - Pedestrians: wider pavements.
 - Cycleways and bike parking.
 - e-scooters and “Micromobility”
- Focus road space on
 - Deliveries, essential workers, the disabled, car clubs, eV charging points, public transport
- Pay for much better public transport by increasing charges for:
 - Private carparks (especially in the central zone)
 - Parking on public streets
 - Illegal pavement parking
 - Dropped curbs

Better uses for our streets
